

## CL4-CAM

### Headstock

The headstock is now made from cast steel for extra strength. The phosphor bronze bearing offers long life, unrivalled support and is adjustable to offer years of reliable performance.

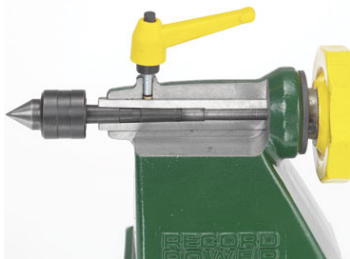

### Capacity

With a 36" capacity between centres and the ability to turn up to a 30" bowl when using the optional CL3/B all your turning needs can be catered for.

### Bed Bars

The solid steel chromed bed bars add weight, rigidity and strength while providing smooth travel for head, tail and toolrest banjo.

### Tailstock

### Variable Speed Unit

Recently improved and now more efficient. Provides simple, responsive and smooth speed change at the turn of a dial. This unit is assembled in the UK using components from a high quality German supplier. It is the industrial solution to variable speed control.
