

## RPMS-R-MK2

### Re-Positionable Fence

Table features 3 sets of holes so the fence mount can be slotted to accommodate a wide range of fence positions.

### Universal Mounting System

The universal router mounting system can accept virtually any router due to the adjustable clamps and two sets of T-slots either side of the aperture.

### Gas Springs

Gas springs help lift the cast iron table, allowing easy access to the underside of the router table.

### Workpiece Clamp

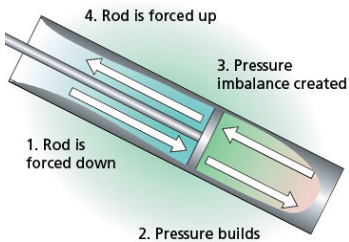

A heavy duty clamp holds the timber in position preventing any movement or slipping while undertaking end grain work and can be re-positioned and clamped at an angle when required.

### Pressure Pad Included

The pressure pad helps to hold the workpiece against the fence to eliminate slipping.

### Sliding Carriage

The sliding carriage makes accurate end grain work much easier.

## Reversible Fence

If you prefer to profile on the cast table without leaning over the sliding table, the fence can be quickly and easily mounted the other way round so you can work from the cast iron side.
