

Instructions for use of Sitesafe Footwear

This footwear complies with the requirements of Directive 89/686/EEC and the above reference standards.

USER INFORMATION

PRODUCT CARE:

Please look after your footwear. Check the soles of your footwear regularly, keeping cleats free from stones. Avoid scuffing the upper leather or treading on sharp edges that will cut the sole. Clean your shoes regularly removing excess mud/dirt with a damp cloth, allowing to dry thoroughly overnight at room temperature. Never force dry your footwear, direct heat may distort the upper causing leather to crack. If your footwear has nubuck or suede upper gently rub with a stiff bristled suede brush. If the laces become worn, replace immediately to ensure a good fit. If the footwear becomes damaged, it will not continue to provide the specified level of protection and should be immediately replaced.

CERTIFICATION BODY:

ITS Testing services (UK) Ltd, Centre Court, Meridian Business Park, Leicester, LE19 1WD, UK (Notified Body 0362).

These products are classed as Personal Protective Equipment (PPE) by the European PPE Directive 89/686/EEC and have been shown to comply with this Directive through the European Standard.

CAREFULLY READ THESE INSTRUCTIONS BEFORE USING THIS PRODUCT

This footwear is designed to minimise the risk of injury from the specific hazards as identified by the marking on the particular product (see marking codes below). However, always remember that no item of PPE can provide full protection and care must always be taken while carrying out the risk-related activity.

PERFORMANCE AND LIMITATIONS OF USE:

These products have been tested in accordance with EN ISO 20345: 2011 for the types of protection defined on the product by the marking codes explained below. However, always ensure that the footwear is suitable for the intended end use.

FITTING AND SIZING:
To put on and take off products, always fully undo the fastening systems. Only wear footwear of a suitable size. Products which are either too loose or too tight will restrict movement and will not provide the optimum level of protection. The size of these products is marked on them.

COMPATIBILITY:

To optimise protection, in some instances it may be necessary to use this footwear with additional PPE such as protective trousers or over gaiters. In this case, before carrying out the risk-related activity, consult your supplier to ensure that all your protective products are compatible and suitable for your application.

STORAGE AND TRANSPORT:

When not in use, store the footwear in a well-ventilated area away from extremes of temperature. Never store the footwear underneath heavy items or in contact with sharp objects. If the footwear is wet, allow it to dry slowly and naturally away from direct heat sources before placing it into storage. Use suitable protective packaging to transport the footwear, e.g. the original container.

REPAIR:

If the footwear becomes damaged, it will NOT provide the optimum level of protection, and therefore should be replaced as soon as is practicable. Never knowingly wear damaged footwear while carrying out a risk related activity. If in doubt about the level of damage consult your supplier before using the footwear.

CLEANING:

Clean your footwear regularly using high quality cleaning treatments recommended as suitable for the purpose. NEVER use caustic or corrosive cleaning agents.

WARNING:

The footwear must not be worn without hose.

INSOCKS:

The footwear is supplied with a removable insock or seat sock which was in place during testing. The insock should remain in place whilst the footwear is in use. It should only be replaced by a comparable insock supplied by the original manufacturer.

WEAR LIFE:

The exact useful life of the product will greatly depend on how and where it is worn and cared for. It is therefore very important that you carefully examine the footwear before use and replace as soon as it appears to be unfit for wear. Careful attention should be paid to the condition of the upper stitching, wear in the outsole tread pattern and the condition of the upper/outsole bond.

MARKING:

The product is marked with:

UK 3 EUR 36 Asia 22 USA 4	Size of product
	CE mark
S1 SRC	Number of European standard

Example of marking

BS EN ISO 20345:2011
S1P SRC

EXPLANATION OF MARKING CODES USED TO DEFINE LEVEL OF PROTECTION PROVIDED:
EN ISO 20345:2011 SB - Safety Basic, footwear protects the wearers toes against mechanical risk, tested with 200J impact energy and 15000N compression force.

CLASS I FOOTWEAR: Upper from material other than all rubber or polymeric materials	
S1 =	Safety basic + Closed seat region + Antistatic + Energy absorption of the seat region + Oil/water resistant outsoles
S2 =	As S1 plus: Water resistance of the upper
S3 =	As S2 plus: Penetration resistance of the outsole + Cleated outsoles

Additional foot protection may be provided and the following marking codes identify the protection offered:

Protection offered	Marking
Penetration resistant (Force required to penetrate the sole complex shall be not less than 1100N)	P
Energy absorption of the seat region (Minimum energy absorption of 20J)	E
Metatarsal protection (100J impact protection over metatarsals)	M
Antistatic (Electrical resistance 0.1-1000MΩ tested at 100V DC in both wet and dry atmospheres)	A
Cold insulation of the sole complex (Exposure to -17°C for 30 Minutes, maximum internal temperature decrease 10°C)	CI
Resistance to fuel oil (Maximum swell of 12% after 22 hours exposure to fuel oil)	FO
Water resistance (Whole footwear flexed in water for 80 minutes with no significant water penetration)	WR
Water penetration and absorption (upper material flexed in water for 60 minutes with no significant water penetration or absorption)	WRU
Resistance to hot contact (Exposure to 300°C for 60 seconds with no cracking)	HRO
Heat insulation of the sole complex (Exposure to 150°C for 30 minutes, maximum internal temperature increase 22°C)	HI
Slip resistance on ceramic tile floor with Sodium laurel sulphate lubricant (Minimum CoF 0.32 Flat, 0.28 Heel)	SRA
Slip resistance on steel floor with glycerol lubricant (Minimum CoF 0.18 Flat, 0.13 Heel)	SRB
Slip resistance on ceramic tile floor with Sodium laurel sulphate lubricant and on steel floor with glycerol lubricant	SRC

ANTISTATIC FOOTWEAR:

Antistatic footwear should be used if it is necessary to minimise electrostatic build up by dissipating electrostatic charges, thus avoiding the risk of spark ignition of for example flammable substances and vapours, and the risk of electric shock from any electrical apparatus or live parts has not been completely eliminated. **It should be noted however that antistatic footwear cannot guarantee an adequate protection against electric shock as it introduces only a resistance between foot and floor.** If the risk of electric shock has not been completely eliminated, additional measures to avoid the risk are essential. Such measures, as well as the additional tests mentioned below, should be a routine part of the accident prevention programme of the workplace. Experience has shown that, for antistatic purposes, the discharge path through the product should normally have an electrical resistance of less than 1000MΩ at any time throughout its useful life. A value of 100KΩ is specified as the lowest limit of resistance for a product when tested. In order to ensure some limited protection against dangerous electric shock or ignition in the event of an electrical fault, the following additional test is required: operating voltages up to 250V. However, under certain conditions, users should be aware that the footwearer might be inadequately protected and additional provisions to protect the wearer should be taken at all times. The electrical resistance of this type of footwear can be changed significantly by flexing, contamination or moisture. This footwear will not perform its intended function if worn in wet conditions. It is, therefore, necessary to ensure that the product is capable of fulfilling its designed function in dissipating electrostatic charges and also giving some protection during the whole of its life. The user is recommended to establish an in-house test for electrical resistance and use it at regular and frequent intervals. Class I footwear can absorb moisture if worn for prolonged periods and in moist and wet conditions can become conductive. If the footwear is worn in wet conditions where the soiling material becomes contaminated, wearers should always check the electrical properties of the footwear before entering a hazard area. Where antistatic footwear is in use, the resistance of the flooring surface should be such that it does not invalidate the protection provided by the footwear. In use, no insulating elements with the exception of normal hose should be introduced between the inner sole of the footwear and the foot of the wearer. If any insert is put between the inner sole and the foot, the combination footwear/insert should be checked for its electrical properties.

PENETRATION RESISTANT FOOTWEAR:

The penetration resistance of this footwear has been measured in the laboratory using a truncated nail of diameter 4.5mm and a force of 1100N. Higher forces or nails of smaller diameter will increase the risk of penetration occurring. In such circumstances as an alternative, two generic types of penetration resistant insert are currently available in PPE footwear. These are metal types and those from non-metal materials. Both types meet the minimum requirements for penetration resistance of the standard marked on this footwear but each has different additional advantages or disadvantages including the following:

Metal: Is less affected by the shape of the sharp object/hazard (ie diameter, geometry, sharpness) but due to shoemaking limitations does not cover the entire lower area of the shoe.

Non-metal: May be lighter, more flexible and provide greater coverage area when compared with metal but the penetration resistance may vary more depending on the shape of the sharp object/hazard (ie diameter, geometry, sharpness).

For more information about the type of penetration resistant insert provided in your footwear please contact the manufacturer or supplier detailed on these instructions.

CZ

Návod na používání obuví Sitesafe

Tato obuv vyhovuje požadavkům směrnice 89/686/EHS a vše uvedeným normám.

INFORMACE PRO UŽIVATELE

PEČOVÁT O VÝROBU:

Pečujte o svou obuv. Pravidelně kontrolujte podrážky obuví a odstraňujte kamínky zachycené v drážkách. Předcházejte odru včerné usni a neslepajte na oříšky, kterým prozřít podrážku. Obuv pravidelně čistěte. Vlhkým hadříkem odstraňte bahny a špinu a poté nechte obuv přes noc vyschnout při pokojové teplotě. Obuv nikdy nesijte působením vysokých tepotí. Průměrný tepelný zdroj mohou způsobit deformaci vrchu a větši k popraskaní semíns. Pokud dojde k opotrebení kaník, okamžitě je opravte, aby byly dobré seděly na noze. Obuv, u které došlo k poškození, již neposkytuje uvedenou ochranu a musí být okamžitě vyměněna.

CERTIFIKOVANÝ ORGAN:

ITS Testing services (UK) Ltd, Centre Court, Meridian Business Park, Leicester, LE19 1WD, Spojené království (notifikovaná osoba 0362).

Tyto výrobky jsou klasifikovány jako osobní ochranné prostředky (OOP) podle evropské směrnice pro OOP 89/686/EEC a byly provádzána, že splňují požadavky této směrnice podle evropských normy.

PŘED OPUSTÍM VÝROBU SI PEČULIVĚ PREČTEĆE NAVOD.

Tento výrobek je konstruován tak, aby minimalizoval riziko záření s ohledem na konkrétní nebezpečí podle záření na každém výrobku (viz níže uvedené kódы značení). **Nezapomeňte však, že žádny OOP neposkytuje dokonala ochranu a při činnostech, u kterých hrozí nebezpečí, je nutné postupovat s maximální opatrností.**

VÝKON A OMĚZEŇ:
Tyto výrobky byly otestovány podle normy EN ISO 20345: 2011 v závislosti na typu ochrany, která je na výrobku uvedena výrobcem. Vždy se však proslověte, že je obuv vhodná k zamýšlenému účelu.

ZKOUŠENÍ A VELIKOSTI:

Při obuvání a využívání obuv vždy zcela rozepněte. Noste pouze obuv vhodné velikosti. Příliš volné nebo příliš těsné výrobky mohou omezovat pohyb a neposkytují optimální úroveň ochrany. Velikost je vyznačena na obuvi.

KOMPATIBILITÁ:

Aby byla zajištěna optimální ochrana, je v některých případech nutné doplnit tu obuv o další OOP, například ochranné kalhoty nebo návleky. V takových případech se před zářením rizikového ohrožení obuvadlovače a ujistěte se, že jsou veškeré ochranné prostředky kompatibilní a vhodné k zamýšlenému použití.

SKLADOVÁNÍ A PREPARA:

Obuv, kterou právě nepoužíváte, uchovávejte na dobré větraném místě, na kterém nedochází k extrémním výkyvům teplot. Obuv nikdy neskládejte pod těžkými předměty nebo dohoře v dousu ostrych predmetů. Mokrou obuv nechte pomalu uschnout mimo dosah tepelných zdrojů a deponujte ji u ložisek. Obuv přepravujte ve vzdálenosti od nebezpečího ohrožení.

OPOZVÁNÍ:
Obuv ještě vložit do poškození, jíž NEPOSKYTUJE uvedenou úroveň ochrany a musí být při nejdůležitější příležitosti vyměněna. Po provádění rizikových prací nikdy nosete obuv, o které víte, že je poškozená. Pokud si nejste jisti, jak moc je obuv poškozená, poradte se před jejím dalším používáním se svým dodavatelem.

OSTĚNÍ:

Obuv pravidelně čistěte vysokými čisticími prostředky, určenými k tomuto účelu. NIKDY nepoužívejte lepkavé nebo žírové čisticí prostředky.

VAROVÁNÍ:

Obuv nikdy nepoužívejte bez poškození.

VKLÁDÁK STĚLKÝ:

Obuv je dodávána s vyměnitelnou vkládací stělkou, se kterou byla testována. Stělka musí zůstat, při nošení obuv na svém místě. Muže být nahrazena pouze srovnatelnou stělkou dodávanou původním výrobkem obuvi.

ZIVOTNOST:

Zivotnost konkrétní obuvi je z velké části závislá na způsobu nošení, prostředí, ve kterém je obuv nošena, a péči o ni. Je proto velmi důležité obuv před každým použitím důkladně prohlédnout a vyměnit ji okamžitě, jak začne vykazovat známky výhodnosti proti další nošení. Zvýšenou povorost věnujte stavu svého vrchu, opotřebení dezenu podešev a stavu spojení vrchu s podešví.

ZNAČENÍ:

Výrobek je označen následujícím způsobem:

UK 3 EUR 36 Asie 22 USA 4	Velikost výrobku
	značka CE
BS EN ISO 20345:2011	Číslo evropské normy
S1P SRC	Kategorie poskytované ochrany
